

Powers of two

Typst is also a small programming language. This list wasn't typed out by hand — a loop generated it:

2^1 2

2^2 4

2^3 8

2^4 16

2^5 32

2^6 64

2^7 128

2^8 256

2^9 512

2^{10} 1024

Change the 11 to 101 and you'd get a hundred rows without touching the list itself. That is the whole idea of the book: content and computation in the same file.
