

There are 5 days. The first is Mon and the last is Fri.
Counting from the end, Thu sits just before Fri.

The midweek stretch is Tue, Wed, Thu. Is Wednesday in the week? **true**. Reversed, it reads Fri Thu Wed Tue Mon.

A one-item array needs the trailing comma: ("x",) holds 1 item, while ("x") is just a string of 1 letter.

“dry” came off the end; wash and rinse remain on the stack.

Sorted by length, ("kiwi", "fig", "cherry") becomes fig, kiwi, cherry.
